

## ABSTRACT OF THE DISCLOSURE

A grilling station for simultaneously grilling a variety of foods. The station includes a plurality of grilling ovens. Each of the grilling ovens has a housing with an opening for loading food into that housing. A first grilling unit is mounted in each housing for supporting food. A second grilling unit is mounted in each housing positionable above each respective first grilling unit and being vertically moveable in relation to the respective first grilling unit. The first and second grilling units in each of the housings connected to a respective control assembly to determine selectively the length of time energy is supplied to the grilling units providing selective separate grilling times in each of the housings.
